<b>Price</b>	\$49.90

- Studies the characteristics of the pocket park and the relationship between the landscape and people
- A perfect source material for landscape designers and urban planners

As the pace of urbanization accelerates and population and building densities increase, particularly across larger cities, there's much less park space available for people to enjoy. With less investment outlay and a smaller area required, 'pocket parks' could provide the solution for the creation of highly sought-after spaces for activities in high-density city environments. They can be beautiful, green areas that increase the ecological benefits of the environment, and would help improve and satisfy the local resident's need to enjoy a space outdoors. This book studies the characteristics of the pocket park and the relationship between the landscape and people, and it is perfect source material for landscape designers and urban planners.

**Angus Bruce** is a Principal at HASSELL and the practice's Head of Design for Landscape Architecture. Based in the HASSELL Sydney studio, Angus leads an international team of landscape architects undertaking a wide range of sustainability-driven projects: from city-wide strategic urban design to the design of public parks and plazas; from site-wide green infrastructure to intimately-scaled green roofs. With over 25 years' experience specialising in landscape architecture and horticulture in urban environments, Angus focuses on the intersection of design, environment, culture and function to deliver exceptional value to clients and communities, and ultimately create places people love.
